Compare that with the container-based approach on the right. Here, the host operating system's kernel and resources are directly shared by the containers through the Docker daemon. This means that the containers are far more lightweight than a virtual machine, meaning you can run far more of those on the same amount of hardware.

## **Docker - A Quick Overview | Sitecore**

Furthermore, you can use the containers to more easily manage different software environments for your various development and production-related tasks. Installing Docker via Repo. One of the ways to install Docker on your server is by using the Docker repository (repo) that can be downloaded from the official Docker servers.
