Your brain has many parts but speech is primarily controlled by the largest part of the brain, the cerebrum. The cerebrum can be divided into two parts, called hemispheres, which are joined by a...

What Part of the Brain Controls Speech: Several Parts of ...

Human speech is served by a bellows-like respiratory activator, which furnishes the driving energy in the form of an airstream; a phonating sound generator in the larynx (low in the throat) to transform the energy; a sound-molding resonator in the pharynx (higher in the throat), where the individual voice pattern is shaped; and a speech-forming articulator in the oral cavity . Normally, but not necessarily, the four structures function in close coordination.

Speech and Brain Mechanisms | Neurology

Memory and Brain Mechanisms The human brain is an incredible organ that keeps the heart pumping and allows a person to kick a ball. The brain is important to allow a person to read, to solve problems, and to connect with other people. Memory is an essential function of the brain for a person to live, learn, and interact with others.

The Importance Of Memory And Brain Mechanisms - 1243 Words ..

There are several areas of the brain involved in speech production and comprehension discussed in (Carson & Birkett, 2017). Both the left and right hemispheres of the brain are instrumental in this effort. In most brains, the left hemisphere is used to understand and generate speech.
